RADIO STATIONS

Studiotech is undoubtedly one of the major players in the field of broadcast technology, engineering and integration. Customers will benefit from our long experience regarding study, design and realisation of such projects.

Whether you are a public or private radio organisation (large or small), Studiotech has the ability to design the studio which will correspond to your needs. You define your original configuration and together we will find the solution which will meet your needs entirely.

Our team will always be at your side to help you with choice of equipment, provide technical assistance and manage all technical implications. Our experience and our expertise will work towards the same objective – to deliver a complete system keeping in mind your budget and the equipment capabilities.

We always achieve very high quality standards, paying great attention to detail in completing your project. In choosing Studiotech as a partner, you can be

assured that the project will be realised in a calm and purposeful manner with an eye on developing solutions and the technology of the future.

We have numerous references (home and abroad) including a three year frame contract to refurbish 20 radio studios for RTBF (Belgium) and installing radio stations overseas (Cameroon, Mauritania, Kuwait, etc). See some illustrations of our projects in the photographs on the reverse.
